Molly Chi

Frontend Engineer — UX-focused, AI-native

SUMMARY

Frontend engineer with 6–7 years across hospital systems, digital health and industrial AIoT. I turn complex requirements into clear user flows and maintainable components, so non-engineers (nurses, factory operators, integrators) can use the product intuitively. At ASUS I drive frontend decisions; AI coding agents write most of my code while I own the specs, architecture and verification — a workflow I turned into a team practice.

CORE STRENGTHS

- **User experience** — Design flows from the user's side — faster alert handling for nurses, an easier train-to-deploy flow for AI models, fewer false alarms via interactive ROI drawing.
- **AI-native development** — AI agents write most of my code; I write precise specs, break down tasks, and review and verify every output.
- **Technical leadership** — Led 4 engineers; owned tech selection and Git workflow; built a UI component library from scratch (+30% feature velocity).

EXPERIENCE

ASUSTeK Computer · Software Engineer (R&D) — May 2024 – Present

Introduced an AI-agent workflow for the team (spec → AI implementation → review & verification): much faster delivery, far fewer bugs, and quicker fixes.

AI CCTV Workplace Safety Platform (AIS EHS)

- Solely led the frontend: interactive ROI drawing on live video and real-time alerts that cut false alarms; owned architecture, schedule and video streaming.
- Flagship product adopted by a leading Taiwanese semiconductor maker and showcased at an international automation exhibition.

AIS PHM Predictive Maintenance — full rebuild

- Led a modular re-architecture and built an enterprise UI component library and design guidelines from 0 to 1 (+30% feature velocity).
- Added dynamic i18n and theming; redesigned monitoring charts so complex trends are easier to read.

AISVision AI Vision Platform

- Led 4 engineers on a one-stop platform to train, validate and deploy AI vision models (semiconductor, PCBA, pharma).
- Owned tech selection, state management and Git workflow; simplified the train-to-deploy flow for non-expert users.

Cognito Health · R&D Software Engineer — May 2022 – Apr 2024

- **Fall & Pressure-Injury Prevention System**: Refactored React UI and fixed core defects; streamlined nurses' workflow to respond faster to abnormal events.
- **Cross-platform Mobile App (built solo)**: Real-time MQTT data, FCM push with alert sounds, JWT auth and i18n; shipped the Android APK end to end.
- **Admin Console & Billing System**: Built the billing system solo (reports, PDF export, permissions) plus Ant Design components and Chart.js dashboards.

Koo Foundation Sun Yat-Sen Cancer Center · Frontend Developer — Sep 2020 – May 2022

- **Breast Cancer Clinical Decision Analytics**: Clinical data analysis UI in React + Highcharts supporting the medical team's decisions.
- **Digitizing Hospital Workflows**: Moved paper questionnaires, medical orders, check-ups and meal ordering online, improving data accuracy.

SKILLS

UX
User flow design · Interaction design · Design systems · Responsive design · i18n · Photoshop · Illustrator

AI-native workflow
Claude Code · Spec-driven development · Agentic task orchestration · AI output review & verification

Frontend
Vue 3 · React · React Native · TypeScript · JavaScript · Pinia · React Router

UI & charts
Tailwind CSS · shadcn/ui · Ant Design · MUI · Bootstrap · Sass · Chart.js · Highcharts · fabric.js

Backend & tools
Python (FastAPI) · Node.js · MQTT · Firebase FCM · Git · MongoDB · MSSQL

EDUCATION

National Ilan University
B.A., Leisure Industry & Health Promotion (graduated in 3.5 years)
2014 – 2018

Workforce Development Agency
Frontend Web Development Program
2020

CERTIFICATES

Web Design Technician (Level C)
GEPT Intermediate

LANGUAGES

Mandarin (native)
English (intermediate)
Taiwanese (intermediate)
